Description: I want to propose a modification to the excellent LinHES theme:

In the recordings view, it would be nice to see the season/episode number for shows in the list (instead of in details view only), so it is possible to quickly scan available episodes.

I created a patch to show season/episode number instead of the recording date (which personally I am not that much interested in).

Screenshot of recordings screen with patch:

!LinHES-show-episode.jpg!

For shows where season/episode are available, they are displayed in place of the recording date, otherwise the recording date is displayed.

The patch to display season/episode number is here (also attached to the ticket):
