LinHES - Bug # 264: problem in package athcool - program seems to run forever in tty1

Status:	Closed	**Priority:**	Normal
Author:	graysky	**Category:**	
Created:	03/07/2009	**Assignee:**	jams
Updated:	12/25/2011	**Due date:**	12/31/1969
Description:	If I installed athcool the add-service.sh is auto run to add athcool to the /var/service and the /etc/sv/ dirs but for some reason, if I ctrl+alt+F1 I see athcool being executed in an infinite loop! I manually ran: <code> # remove_service.sh athcool</code> Then simply added the following to my /etc/runit/1 <code> /usr/sbin/athcool on </code> After a reboot, when I check in tty1, athcool was only executed once. For some reason /etc/sv/athcool runs in a loop.

Sounds like we need to invoke it with a no-auto-detach type option to atcool (which it doesn't seem to have...), or the "once" option to sv.

Try the new version of the pkg. Please verify that athcool is running, but sv does not keep trying to restart it.

ps -ef |grep athcool

&

sv status athcool

03/10/2009 04:44 pm - graysky

Did it. If I Ctrl+Alt+F1 it's not continuously running as it did before.

<code>
$ ps -ef | grep athcool
root   2651 2643 0 16:38 ?   00:00:00 runsv athcool
squishy   3273 3251 0 16:40 pts/0   00:00:00 grep athcool
</code>

And

<code>
sv status athcool
down: athcool: 156s, normally up
</code>

Good job and thank you as always. You rock, Jams.
