Updated:	03/09/2009	Due date:	
Description:	<p>I just did a fresh auto-install on an alternate drive to check some things. During CD install I chose "Update All". Otherwise everything is pretty much defaults and I have made no modifications, the oven is still warm.</p> <p>Through MythTV ("Media Library" > "Watch Videos") I tried to play three types of .mov files: h264, photo-jpeg and sorenson. My memory is that all three of these types played in an out-of-the-box Knoppmyth r5.5 install.</p> <p>Attempt to play yields this in mythfrontend.log...</p> <pre>//2009-03-08 12:42:07.158 XMLParse::LoadTheme using /usr/share/mythtv/themes/default/video-ui.xml sh: mplayer-resumer.pl: command not found//</pre> <p>(I hope I'm not repeating a task! If I am, sorry. I did a cursory look through flyspray and search for the error.)</p>
