

LinHES - Bug # 282: No AU grabber and unable to install Shepherd

Status:	Closed	Priority:	Normal
Author:	girikers	Category:	
Created:	03/11/2009	Assignee:	jams
Updated:	12/25/2011	Due date:	12/31/1969
Description:	I appreciate that the current version is a test so when there was no tv_grab_au I could understand, so I then went and tried to install Shepherd to make up the shortfall. The problem is I downloaded the Shepherd program and it fails with some dependency issues that I can't resolve as some require the use of cpan, which fails to work as it appears to compile things on the fly. It would appear that there are no packages that are installed to allow compilation of programs, which is understandable. FYI: Shepherd relies on a lot of Perl modules.

What all you do need to make this happen? If you can provide links to tv_grab_au, etc. I can compile it on my end.

03/12/2009 06:59 am - girikers

The dependency details are: <http://svn.whuffy.com/index.cgi/wiki/Installation#PerlDependencies>

It there is anything else I can help with let me know.

03/13/2009 02:38 am - girikers

From the above website, the current Mandatory modules are:

- * XMLTV::Ask
- * Algorithm::Diff
- * Compress::Zlib
- * Cwd
- * Data::Dumper
- * Date::Manip
- * Getopt::Long
- * List::Compare
- * LWP::UserAgent
- * POSIX Digest::SHA1

Optional Modules are:

- * DateTime::Format::Strptime
- * File::Basename
- * File::Path
- * GD
- * HTML::Entities
- * HTML::TokeParser
- * HTML::TreeBuilder
- * IO::File
- * Storable
- * Time::HiRes
- * XML::DOM
- * XML::DOM::NodeList

- * XML::Simple
- * HTTP::Cookies
- * File::Basename
- * LWP::ConnCache
- * Digest::MD5
- * Archive::Zip
- * IO::String
- * DateTime::Format::Strptime
- * JavaScript

It is also stated that this list may not be current, the page itself was last modified on the 2/2/09.

03/22/2009 04:49 pm - cecil

If I search CPAN, I don't find "XMLTV::Ask" or "Cwd". The other mandatory deps have been compiled or were already in the repo.

03/22/2009 10:41 pm - girkers

Here is some information on Cwd: <http://search.cpan.org/~smueller/PathTools-3.29/Cwd.pm> it appears to be part of the PathTools

XMLTV::Ask is a module within XMLTV, <http://cpan.uwinnipeg.ca/dist/xmltv>

If there is any more information you need please let me know.

04/04/2009 11:55 pm - jams

- perl-list-compare
- perl-algorithm-diff
- perl-digest-sha1
- perl-javascript-1.12
- perl-pathtools-3.29-1

After installing the above modules, Sheperd was able to install without complaining. Please give it a try and let us know.

Please note that Sheperd is currently not part of the repository.

Girkers: Any news?

04/11/2009 08:29 pm - girkers

I'm not sure how you want me to test this. Would you like me to install a fresh 6.00.07, update using Pacman and then try Shepherd? Let me know and I will give it a go.

04/11/2009 08:36 pm - jams

Installing 6.00.07 is an option.

Or you could try to install shephard on whatever version your running now. All the packages you requested should be there to install via pacman.

06/02/2009 09:49 am - bigtoedsloth

I can confirm that the command

```
sudo pacman -S perl-list-compare perl-algorithm-diff perl-digest-sha1 perl-javascript perl-pathtools
```

installs all the perl packages that shepherd needs for 6.00.08. This is far, far easier than installing manually via CPAN ...

06/04/2009 03:56 pm - jams

Good to know.

Leaving the ticket open pending whatever cecil wants todo with it.

06/06/2009 01:54 am - cecil

sudo pacman -Sy shepherd-dep will install the needed packages in one go. James, please add shepherd-dep under Software, then close this ticket.

Thanks all.

12/25/2011 03:10 pm - jams

- *Target version changed from 8.0 to 6.00.04*
