

LinHES - Bug # 313: Problem Installing with VIA CX700M

Status:	Closed	Priority:	Normal
Author:	vabiro	Category:	
Created:	03/26/2009	Assignee:	cecil
Updated:	12/25/2011	Due date:	12/31/1969
Description:	<p>I am using a Jetway J7F5M2G-VHE-LF:</p> <p>http://www.jetway.com.tw/jw/ipcboard_view.asp?productid=371&prname=J7F5M2G-VHE-LF</p> <p>Which uses the CX700M chipset and I can't seem to get either the VESA or a VIA driver to work.</p> <p>When I allow it to run and detect the configuration the startup ends on a prompt with "VIA", like it was typed in. Hitting enter results in a protest that the command is invalid.</p> <p>If I select force VESA from the debug menu, I am left with a flashing cursor on the screen and no xWindows.</p> <p>Thanks Victor</p>
