LinHES - Bug # 417: mythtv cannot access ntfs-3g

Status:	Closed	**Priority:**	Normal
Author:	UniCav	**Category:**	
Created:	06/26/2009	**Assignee:**	cecil
Updated:	12/25/2011	**Due date:**	12/31/1969
Description:	Just discovered that ntfs-3g USB devices cannot be accessed by mythtv.		
	When I plug in an external USB drive formatted as ntfs-3g (i.e. a new drive I neglected to reformat as FAT32 or normal NTFS)		
	udev auto-mounts it under /media/usb1 but it will not show up like other devices in Watch Videos > Media		
	in xshell, ls /media/usb1 returns Permission Denied.		
	root can access it fine and I can play videos from the device in mplayer as root.		
	ntfs-3g has been added to archlinux AUR (ntfs-3g-ar 2009.4.4AR.1-1)		
	Not sure if this wold solve the problem but all the google hits I've followed suggest it will.		
	Don't want to install it without recommendation from Cecil or another maintainer
