This seems to be a general problem with a general fix:

<http://webupd8.blogspot.com/2009/07/how-to-fix-full-screen-flash-videos-in.html>

Would you like to update LinHES's firefox package to add this pre-launch script so that 'firefox' runs the flash fix and then firefox?

#### 08/05/2009 08:36 pm - GregFrost

That sounds like a good plan. rename firefox to firefox.bin and then make firefox a script that sets LD\_PRELOAD and then runs firefox.bin

When I tried it, I didnt have the flash plugin installed. I think we should also make the flash plugin part of the firefox package.

Is there a location to install plugins other than ~/.mozilla/plugins to make a given plugin available to all users? Otherwise I can foresee problems with updrades that restore the contents of the home directories.

#### 08/05/2009 09:12 pm - GregFrost

plugin made part of package and installed in /usr/lib/firefox-3.5/plugins

script created with LD\_PRELOAD

synching changes now.
