

LinHES - Bug # 520: user cannot use "special" characters in passwords in the installation GUI

Status:	Closed	Priority:	Normal
Author:	graysky	Category:	
Created:	08/22/2009	Assignee:	
Updated:	06/10/2010	Due date:	
Description:	When setting up a password (either for root or a user) in the setup GUI, users cannot use "special" character such as #~%^*#,. etc. in the password or else the password is rejected. That said, the user can su to root AFTER the install and change the password using a "special" character via the passwd command, just not during the formal install. Minor bug.
