Description:
I seem to have a functioning system now after upgrading from 5.5. It took me a while to figure out the irblaster and change channel script.

One thing I noticed while doing configuration. The Advanced Settings screens are blank. The only thing that shows is the navigation buttons at the bottom of the screen. The other configuration menus seem to be OK. I manually installed samba and copied my old smb.conf and smbpasswd and samba seems to work. The Arch version of Webmin does not have a Samba module and I miss that feature. Am I missing anything else from Advanced Settings?

The list of recorded programs is OK except the channel number and channel name for existing programs is replaced by recording number. New recordings show channel number and channel name.

Thanks for all the hard work! LinHES is really slick!
