Updated:	10/21/2011	**Due date:**	
Description:	The ability to manually assign the three partitions that R6 needs to existing partitions would be nice. For example, I want R6's root partition to go to /dev/sda5 and swap to go to /dev/sda6, and /myth to /dev/sda7. I'm not requesting access to create partitions, the user would need to do this out of the R6 installer.
