| <b>Description:</b> | My DVD drive closes automatically within 0-10 seconds after eject regardless of if it's done via the menu or manually.<br><br>Fix appears to be to <a href="https://bugs.launchpad.net/ubuntu/+source/linux/+bug/356631">[[https://bugs.launchpad.net/ubuntu/+source/linux/+bug/356631 update the udev package]]</a> to a version later than 141-1. Latest one in the main Arch repo is 145... if I have a chance this weekend I will try installing this over R6 to see if it indeed fixes the problem. |                  |        |

### History

Tried udev 146 from main Arch repo and it did not solve the problem. (It also created a bunch of worrisome messages about missing devices.) Was able to revert to the normal package.
