

LinHES - Bug # 765: Pacman servers incorrect in R7

Status:	Closed	Priority:	High
Author:	mihanson	Category:	Packages: Core
Created:	03/10/2011	Assignee:	cecil
Updated:	09/02/2011	Due date:	
Description:	Pacman servers referenced in /etc/pacman.conf are incorrect. Should point to -testing -- at least why we're in alpha/beta testing

Apparently the iso was created under the incorrect profile. Should be created as linhes-remote-testing-i686. Leaving this open as a reminder. For those having problems updating your R7 systems, edit /etc/pacman.conf and replace the file = file:// lines with:

```
<pre>
[core]
Server = http://linhes.org/repo/i686/core
[extra]
Server = http://linhes.org/repo/i686/extra
</pre>
```

07/03/2011 08:59 pm - mrjackson

This is what works for me,

```
<code>
[core-testing]
Server = http://linhes.org/repo/i686/core-testing
[extra-testing]
Server = http://linhes.org/repo/i686/extra-testing
</code>
```
