Not many locales are included with the base system.

To generate them:

- 1) edit /etc/locale.gen, uncomment the locale you want to use.
- 2) run locale-gen

After this the changes you made rc.conf should work.

Thanks jams ... works for now ... generating and switching for the first test ...

using now de\_DE.UTF-8 ... maybe we could close the thread, after more testing in a few days.

- *Status changed from New to Closed*

de\_DE.UTF-8 is now one of the couple locales that are included by default.

See #782 for more info.
