

LinHES - Bug # 791: MCEUSB Blaster config

Status:	Closed	Priority:	Normal
Author:	grg3	Category:	
Created:	10/24/2011	Assignee:	
Updated:	10/24/2011	Due date:	
Description:	This may be something I am not configuring right but I have done a fresh install of the latest testing version of R7. So far, I have been able to get everything going except blasting. I read on the MythTV Wiki that all versions of mce systems should blast now. Previously, the version 1 (mine) did not. I have entered mceusb for remote and transmitter and setup a channel change script based on the one posted to the wiki. I can verify that the blaster does work manually by entering irsend SEND_ONCE dct2000 2. It just does not work when I try the remote.

It's a good sign that SEND_ONCE works, that more or less points to the channel change script or a mythtv config problem. Try channel change by itself and see what happens, if that works then it's a mythtv config thing.

Well, I knew I forgot to check something! I copied the wrong channel changer script! Works great now!

Looks like, once again, the bug is in the operator. Sorry to waste your time.
