<b>Description:</b>	<p>I hit 'm' at one point after the installer said it was 100% done, and I called up a menu that seemed to offer me choices that weren't in my best interests: "Install or Upgrade", "Run MythFrontend", "Exit", "Close menu."</p> <p>Other than closing the menu, my guess is that any of those things would nullify the previous effort I made to install.</p> <p>On the one hand, most people won't hit 'm' but on the other hand, those who do will be unsure what, if anything, they're supposed to do. I would recommend not allowing the user to run a menu item that doesn't make sense, given the context of being in the middle of an installation.</p>
