LinHES - Bug # 819: Syslog problem after upgrade to 7.2

Status:	Closed	**Priority:**	Normal
Author:	tscholl	**Category:**	Installation/Upgrade
Created:	03/03/2012	**Assignee:**	
Updated:	05/15/2012	**Due date:**	

Description:	After upgrading from 7.1 to 7.2, getting messages on startup.
	/etc/sv/syslog-ng/run
	:: Starting syslog
	/etc/sv/syslog-ng/run: line 9: /usr/sbin/syslog-ng: No such file or directory
	/etc/sv/syslog-ng/run: line 9: exec: /usr/sbin/syslog-ng: cannot execute: No such file or directory
	Well the message is correct a /usr/sbin/syslog-ng does not exist. There are other locations for syslog-ng but most are directories.

History

03/05/2012 10:47 am - jams

- Category set to Installation/Upgrade

- Target version set to 7.3

- Status changed from New to Resolved

syslog-ng was replaced with rsyslog.
The update procedure should have taken care of stuff for you, but looks like it didn't for everybody.
This can be fixed in 2 different ways
option 1:
- pacman -Sy rsyslog
  pacman -Sy runit-scripts
  remove_service.sh syslog-ng
  add_service.sh rsyslog

option 2:
  pacman -S rsyslog
  pacman -Sy runit-scripts
  sudo systemconfig.py -m hostype
