

LinHES - Bug # 820: Included Twinhan (spelt Twinham in 7.2) remote config doesn't work

Status:	Closed	Priority:	Normal
Author:	girikers	Category:	Other
Created:	03/08/2012	Assignee:	brfransen
Updated:	07/29/2012	Due date:	
Description:	I have upgraded from 6.04 to 7.2 and previously my Twinhan remote control worked as a keyboard and I simply configured MythTV to use the keys associated with the remote. However now that I have upgraded, the remote no longer works AT ALL. I have tried adding a /etc/lirc/hardware.conf however that doesn't work as on boot you get the error: Couldn't find any node at /sys/class/rc/rc*. You can also get this error by running ir-keytable. Some more information on this problem and what I have tried can be found here: http://forum.linhes.org/viewtopic.php?f=23&t=22504 Attached you will find a picture of my remote, and in my configure I have copied the misspelt folder and spelt it correctly and selected it through the config, however it doesn't work.

Just updated my frontend that has this exact remote, I did notice this time that during the setup that it couldn't find a file it was looking for something to do with MythVantage and Twinhan_USB and that the path did not exist.

In both case the /dev/lircd device is NOT being created.
