enlightenment: modify startup patch to also clear the delay when MythVantage window is displayed

This was needed for making E the WM of choice for installs.

mythdb-initial: set E to be the default windowmanager

This has the side effect of removing the windowmanger settings sync between the backend and new installs.

- Status changed from In Progress to Closed

Enlightenment + enhanced is now the default for all new installs. Additionally E is used by the iso install process.

A side affect of this is that the windowmanager sync with the backend will no longer occur for new installs.   This is because the sync only happens when the value was null and now all new installs have the value defined.
