| <b>Description:</b> | <p>The Technisat TTS35 is a remote with a USB receiver mainly (only?) sold in Germany. It is bundled with many Technisat DVB receiver cards, so quite a number of people may own one.</p> <p>Attached to this ticket is a zip-file the contents of which when placed in ~/remotes allow the remote to operate in LinHES.</p> <p>A png-file showing the function each key performs is included in the same directory.</p> <p>This could be added to /usr/MythVantage/templates/remotes/other fore everybody's use.</p> |                  |                |
