Description:	The issue I run into is that I don't alway know when one of my frontends is watching a recorded program. I know I can get the status by using the Frontend status API: Code: http://mediaroom_sbe:6547/Frontend/GetStatus but it sure would be nice to see all of it in a nice table format. What I would envision is a simple table showing the status of each frontend, similar to the Encoder status page, something like: Frontend Status Frontend: "mbe" is "idle" Frontend: "mbr_sbe" is "playing" "Lost" Frontend: "gbr_sbe" is "paused" "playing" "Wipeout" Frontend: "mediaroom_sbe" is "idle"

supplemental-web: Add menu item for frontend status.

The page takes a bit to load because it queries the frontends in real time, every time.

We need to add a please wait screen or some other dialog box in the future.

Also removed remyth from the menu because it's a dead product.

refs #973

- Status changed from In Progress to Closed

- Category set to Packages: Core

Menu item for frontend status is under utilities.

Table will only display frontends detected via upnp. That means the frontend must be powered on and accepting connections.
