Description:	Again, I'm asking the dependencies for OwnCloud to the (extra) repositories. It is a bit longer list, so it's best viewed at: http://doc.owncloud.org/server/7.0/admin_manual/installation/installation_source.html I had the earlier version working very nicely within LinHES 8, but I had a hard disk failure which forced me to reinstall LinHES from scratch. Luckily, almost no data was lost. After reinstallation I tried using my QNAP's QSync instead, but compared to OwnCloud, it's horrible... So, please, can my request be fulfilled?

Now I feel stupid, but I finally found out that the 'missing' modules were just commented out in /etc/php/php.ini. So this request could be even deleted, since all seems to be in place after all... Sorry for my slowness.
